ELITE AGENTIC SOLUTIONS

AML Automation Toolkit

for Community & Regional Banks

The alert triage framework, SAR narrative template, KYC acceleration playbook, and ROI calculator that BSA officers are using to cut compliance cost 80% without adding headcount.

95%	Typical false positive rate on rule-based AML alerts
60-70%	Alert volume reduction after agentic triage
10 min	SAR narrative drafting time (was 2-4 hours)
$2-5M	Annual AML spend at a typical community bank

Part 1 · Alert Triage Framework

A $2B community bank running standard transaction monitoring rules generates 200-500 alerts per week, ~95% of which are false positives. Every alert, regardless of outcome, requires review and documentation. The result: 3-4 full-time analysts on triage alone.

The 4-Stage Agentic Triage Model

Stage 1: Context aggregation

Agent pulls 12-24 months of customer transaction history, KYC profile, business type, peer comparisons, and prior alert history before any disposition logic runs.

Stage 2: Typology matching

Agent compares the flagged pattern against 80+ FinCEN typologies and the bank's historical disposition patterns for similar customer profiles.

Stage 3: Risk-tiered recommendation

Agent produces one of: auto-close (with full audit trail), analyst review (with context pre-packaged), or escalate to SAR drafting (with narrative pre-drafted).

Stage 4: Explainability artifact

Every disposition ships with a reasoning chain, data points cited, and risk factors weighed — examiner-ready, case-by-case.

Part 2 · SAR Narrative Template

FinCEN-compliant SAR narratives follow a well-defined structure. The agentic system drafts all five sections automatically from the flagged transaction data, customer profile, and alert context. Use this template as a baseline for manual drafting or agent output review.

1. Subject identification

Full legal name, account numbers, TIN/SSN redacted per FinCEN rules, DOB, address, occupation/business type, relationship tenure with bank.

2. Account information

Account types, open dates, signers, average balance, related accounts, cross-ownership flags.

3. Transaction description

Chronological list of suspicious transactions with dates, amounts, counterparties, channels, and locations. Aggregate totals by pattern type.

4. Suspicious activity explanation

Plain-English description of the pattern, typology classification (structuring, layering, smurfing, etc.), and why it deviates from the customer's expected profile.

5. Recommended action

Continued monitoring, relationship exit, or law-enforcement referral. Include the decision rationale and supervisor sign-off.

Time savings: 2-4 hours per SAR → ~10 minutes (including officer review). For 10 SARs/month, that recovers 30+ analyst hours.

Part 3 · KYC / CDD Acceleration Playbook

Community banks typically take 3-4 weeks to onboard a new business customer through full KYC and CDD. Agentic orchestration cuts this to 3-5 days without reducing diligence depth.

Day 1: Automated intake

Agent ingests application, runs entity verification, pulls beneficial ownership from state registries, sanctions/PEP screening, adverse media scan.

Day 2: Risk tiering

Agent scores customer against risk model (industry, geography, transaction profile, ownership opacity). Low-risk customers progress automatically; higher-risk routed to EDD queue.

Day 3-4: Enhanced due diligence (if needed)

Agent drafts EDD questionnaire, collects required documents, validates corporate docs, and packages everything into the compliance case record.

Day 5: Approval + monitoring setup

BSA officer reviews packaged case, approves/declines, and agent provisions transaction monitoring profile calibrated to this customer type.

Part 4 · Agentic AML ROI Calculator

Plug in your bank's numbers. The template below uses a $2B community bank baseline.

Metric	Before	After Agentic AML	Impact
Weekly alerts to analysts	400	120-160	**60-70% reduction**
Hours/wk on alert triage	~133 hrs	~40-50 hrs	**~85 hrs/wk freed**
FTEs on triage	3.5	1.0-1.5	**2+ FTE capacity freed**
Avg SAR drafting time	3 hrs	10 min	**~94% time cut**
SAR analyst hrs/month (10 SARs)	30 hrs	2-3 hrs	**~27 hrs/mo freed**
KYC onboarding time	4 weeks	5 days	**~80% faster**
Annual compliance cost	$2.0-5.0M	$0.4-1.0M	**~80% reduction**

Payback timeline: most deployments break even in weeks, not quarters. The FTE capacity freed in the first month typically covers annual platform cost.

Part 5 · Examiner-Ready Documentation Checklist

What examiners expect to see for agentic AML workflows:

- Model risk management documentation (SR 11-7 alignment) for the agent's decision logic
- Ongoing validation report: sample case reviews, false positive/negative analysis
- Explainability artifact per disposition: reasoning chain, data cited, risk factors weighed
- Escalation protocol: defined thresholds for human review, SAR drafting, relationship exit
- Change control: every agent logic update versioned, reviewed, documented
- Independent testing program covering the agent layer quarterly or after material changes
- Board and committee reporting cadence: monthly MI on agent disposition patterns and outcomes
- Data lineage: where each data point in an alert decision originated and when it was pulled

Part 6 · Vendor Comparison Scorecard

Capability	Rule Engines (Actimize, Oracle)	RPA (UiPath, Automation Anywhere)	Agentic AI (Elite Agentic Solutions)
Detection	Strong	None (orchestration only)	**Layered above rules**
False positive reduction	None	None	**60-70%**
Contextual reasoning	No	No	**Yes**
SAR narrative drafting	Manual	Manual (templated)	**Auto, FinCEN-formatted**
Adapts to portal/UI changes	N/A	Breaks	**Self-adapts**
Unstructured docs	No	OCR pre-processing	**Native**
Learns from outcomes	No	No	**Yes**
Licensing cost (mid-size)	$200K-850K+/yr	$200K+ (w/ maint.)	**Fraction of enterprise**
Implementation	6-18 months	3-9 months	**Weeks**

Ready to pilot?

Book a 30-minute operations assessment. We'll map your current alert volume and compliance cost baseline, and show you exactly what a 60-70% reduction looks like for your bank — with no commitment.
