Healthcare RCM Automation Checklist

12 Processes You Should Automate Today

Why This Checklist Matters

Healthcare revenue cycle management is broken. Administrative complexity drains billions from the system every year — money that should go to patient care. The numbers tell a sobering story:

$265B	14.2%	$4.9M	73%
Wasted annually on healthcare admin	Average claim denial rate	Lost per hospital/year to preventable denials	Denied claims are recoverable

> The Core Problem: 73% of denied claims are recoverable, but only 35% ever get appealed — because staff simply don't have the bandwidth. That gap represents millions in lost revenue for every mid-size health system.

This checklist identifies the 12 highest-ROI processes to automate first — ranked by the impact they deliver and the pain they eliminate.

Sources: JAMA, "Waste in the US Health Care System" (2019); McKinsey & Company, "Administrative simplification" (2021); MGMA Stat, Claim Denial Benchmarking (2023).

The 12-Process Automation Checklist

Review each process below. Check the ones your team still handles manually, then tally your score on the final page.

Process / Pain Point / Automation Impact	Priority
1. Claim Denial Appeal Generation Pain: 2–4 hours of manual letter writing per appeal Impact: 10-minute AI-drafted appeals with clinical evidence attached	HIGH
2. Prior Authorization Submission Pain: Fax-based workflows, 3–5 day delays per request Impact: Same-day digital submission with auto-populated clinical data	HIGH
3. Payer Portal Login & Status Check Pain: 15+ portals requiring daily manual login by staff Impact: 24/7 automated monitoring with exception-based alerts	HIGH
4. ERA/EOB Reconciliation Pain: Manual matching across systems, error-prone and slow Impact: Auto-match with 98% accuracy, exceptions flagged for review	HIGH
5. Patient Eligibility Verification Pain: Phone hold queues, ~10 minutes per patient Impact: Real-time API verification at scheduling and check-in	HIGH
6. Charge Capture Review Pain: Missed charges = silent revenue leakage Impact: AI flags discrepancies between documentation and charges	MEDIUM
7. Coding Accuracy Audit Pain: Upcoding/downcoding risk; relies on manual spot-checks Impact: AI cross-references clinical documentation against codes	MEDIUM
8. Payment Posting Pain: Manual data entry from multiple remittance sources Impact: Auto-post with built-in validation rules	MEDIUM
9. AR Follow-Up Prioritization Pain: Random calling order wastes time on low-value accounts Impact: AI-ranked worklists by recovery probability	MEDIUM
10. Contract Underpayment Detection Pain: Missed variances between payments and contracted rates Impact: Auto-compare every payment against fee schedules	HIGH

Process / Pain Point / Automation Impact	Priority
11. Patient Statement Generation Pain: Delayed billing erodes patient trust and collections Impact: Auto-generate statements within 48 hours of adjudication	MEDIUM
12. Regulatory Compliance Monitoring Pain: Manual tracking of payer rule changes Impact: Auto-alerts on regulatory and payer policy updates	MEDIUM

Next Steps

Score Your Automation Readiness

Count how many of the 12 processes above your team still handles manually:

0–3 manual processes — You're ahead of most. Focus on optimizing the remaining gaps.
4–7 manual processes — Significant opportunity. Automation could recover $200K–$500K/year.
8+ manual processes — You're leaving $500K+ on the table annually. Prioritize the HIGH items immediately.

How Elite Agentic Solutions Helps

- ✓ AI agents that handle all 12 processes — not just dashboards, but autonomous workflow execution
- ✓ Pre-trained on healthcare workflows — understands CPT, ICD-10, HCPCS, payer-specific rules
- ✓ Connects to 50+ payer portals — Aetna, UHC, Cigna, BCBS, Medicare, Medicaid, and more
- ✓ Results in weeks, not months — average go-live in 3–4 weeks with dedicated onboarding
